About me

Hi, my name is Alexander.

Past 10 months and until now I have spent on studying Programming at Epam courses. I find my new passion and this is the field I want to develop in. I have also started with some freelance tasks but my main goal is to find a full-time job as a Junior Angular developer. Wish me good luck)

The biggest part of my life I've been in hockey Sports. Now I am a department Manager in the Ice Hockey Association responsible for the development of youth hockey. In my spare time I am still playing some hockey in amateur league and focusing on studying Javascript. So I know how to face challenges. Due to the structure of the current working processes, it might take months or years until I see any results of my work, so it is hard to stay motivated. Also together with high level resistance to changes it makes it very difficult to bring innovation there.

And then I met the JavaScript world, which is a kind of art, very logical, complex, not easy. My progress and results there only depended on my effort like in sports.

So I have some relevant background in addition to Epam courses such as team management experience, motivation, enthusiasm, willingness to learn and develop daily and last but not the least my interest in facing challenges and solving tasks.
